

**TAG HEUER AQUARACER**

PROFESSIONAL 200 SOLARGRAPH

## **MADE FOR THE OUTDOORS**

TAG Heuer unveils its Aquaracer Professional 200 Solargraph, the brand's first ever solar-powered watch.

In addition to giving the Aquaracer Professional 200 Solargraph an extraordinary and brightened look, the technology allows to do sports at night with this highly legible watch on the wrist.

# KEY FEATURES

## A PIECE OF TECHNOLOGY

---

TAG Heuer's solar movement provides a host of guaranteed benefits. With the Solargraph movement, no need to change the battery of the watch, it recharges with the sun or artificial light. The movement needs only two minutes in full sunlight to keep the watch running for a whole day.

## DIAL

---

The particular dial of the timepiece is partially transparent, allowing the movement to be charged by sunrays, and the specific blue green color gives off an intense and unique shade reminiscent of the incredible colors of the aurora borealis that light up the nights above the Artic Circles. A beautiful nod to the outdoor philosophy of the Aquaracer.

## CASEBACK

---

The black DLC crewed case back which features the cardinal points make this the perfect resistant companion for every outdoors adventure.

## BRACELET

---

This black rubber strap includes a black DLC folding clasp with double safety push-buttons with adjustment link extension.

## SUPER-LUMINOVA®

---

The 3 hands as well as the unidirectional turning bezel are applied with Super-Luminova®.

## **EMBRACING THE ELEMENTS**

Designed for those who love outdoor sports and adventures in nature – on land or in the water – the watch defined a new high-performance category of versatile wristwatches that could be relied on in extreme conditions.
