

TAG HEUER AQUARACER
PROFESSIONAL 200 SOLARGRAPH

Bold, active and in tune with nature, the philosophy of the TAG Heuer Aquaracer has always been based on a perfect fusion with the elements while maintaining an innate elegance. TAG Heuer's Solargraph movement is known for harnessing the sun, an unlimited energy source and offers many guaranteed benefits.

KEY FEATURES

DESIGN

These 34mm size models come with the key features of the Aquaracer collection: a unidirectional rotating bezel, screw-down crown, water resistance to 200 meters, luminous markings, sapphire crystal and a double safety clasp. The new line features a spectrum of five new dials, each imparting a distinctive character to the timepieces.

DIAL

The dials themselves, emit an alluring charm, making them ideal for those seeking an everyday elegance in their sporting adventures. Completing the traditional Aquaracer quartz models, this series proudly features a date window at 3 o'clock.

MOVEMENT

Intricately designed and meticulously crafted, the TAG Heuer Aquaracer Solargraph series is equipped with a solar quartz movement. A two-minute exposure to direct sunlight is enough to power the watch for an entire day. Once fully charged, after less than 40 hours in the sun, the watch can run for up to 10 months with no light exposure.

BRACELET

The finishing touch is a steel folding clasp with an adjustment link extension, as well as the TAG Heuer shield.

SUPER-LUMINOVA®

Indexes, hour, minute and central hands are applied with Super-Luminova®.

- Steel 60-minute scale unidirectional turning bezel
- Flat sapphire crystal with double anti-reflective treatment
- Steel screwed caseback

Breaking new ground, TAG Heuer introduces mother-of-pearl dials, a first for the Solargraph series. This presented a unique challenge, as Solargraph technology demands semi-transparency to harness solar energy. TAG Heuer ingeniously adapted mother-of-pearl to meet these requirements, ensuring its visibility while allowing light to pass through.
